New FlashDrives

Xmultiple.com

USB flash drives are a new wave in portable data storage. FlashPoint takes this technology one step further.

Data on FlashPoint pen drives can be copied from one pen drive to another. And this is not the only thing different about FlashPoint pen drives.

FlashPoint drives have an integrated female USB connector so you can now plug a cable or another device into the same USB port in which the FlashPoint drive is attached.

Clock

January 2005

Sun	Mon	Tue	Wed	Thu	Fri	Sat
						1

Despite all of this added technology to the FlashPoint drives the physical size of FlashPoint remains the same as most existing pen drives.

They currently (Oct 2004) cost under \$100 for 512Mb.
